Differential Equations | 9th edition |

Pearson Calculus is the

mathematics of change, and rates
of change are expressed by

derivatives. Thus, one of the most
common ways to use calculus is to

set up an equation containing an
unknown function $(y=f(x))$ and its

derivative, known as a differential
equation. 9.1: Modeling with

Pearson Differential equations have

a derivative in them. For example,

$dy/dx = 9x$. In elementary algebra,

you usually find a single number as

a solution to an equation, like $x =$

12. But with differential equations, the solutions are functions. In other words, you have to find an unknown function (or set of functions), rather than a number or set of numbers as you would normally find with an
