unsaturated solution ... An unsaturated solution is a
chemical solution in which the solute concentration is
lower than its equilibrium solubility. All of the solute
dissolves in the solvent. When a solute (often a solid) is
added to a solvent (often a liquid), two processes occur
simultaneously. Dissolution is the dissolving of the
solute into the solvent. What Is an Unsaturated
Solution in Chemistry? Unsaturated solutions are
solutions in which the amount of dissolved solute is
less than the saturation point of the solvent (at that
specific temperature gradient). If the amount of
dissolved solute is equal to the saturation point of the
solvent, the solution is called a saturated
solution. Unsaturated Solutions | Unsaturated solutions

saturated solution. When referring to

organic compounds, unsaturated means a molecule contains double or triple carbon-carbon bonds.

Examples of unsaturated organic molecules include $\text{HC}=\text{CH}$ and $\text{H}_2\text{C}=\text{O}$. In this context, being saturated can be thought of as being "saturated with hydrogen atoms." Unsaturated Definition in Chemistry -

Unsaturated Solution Definition - modapktown.com According to the IUPAC definition, solubility is the analytical composition of a saturated solution expressed as a proportion of a designated solute in a designated solvent. Solubility may be stated in various units of concentration such as molarity, molality, mole fraction, mole ratio, mass (solute) per volume (solvent) and other units.

Solubility - Wikipedia An unsaturated solution is a solution that contains less than the maximum amount of solute that is capable of being dissolved. The figure below illustrates the above process and shows the distinction between unsaturated and saturated. Figure 1. When 30.0 g of NaCl is added to 100 ml of water, it all dissolves, forming an unsaturated solution.
