An analysis of more than 200,000 spiral galaxies has revealed unexpected links between spin directions of galaxies, and the structure formed by these links might suggest that the early universe... Study finds that patterns formed by spiral galaxies show ... The Building Blocks of the Universe Galaxies are vast cosmic islands of stars, gas, dust, and dark matter held together by gravity. Hubble's keen eye has revealed intricate details of the shapes, structures, and histories of galaxies — whether alone, as part of small groups, or within immense clusters. GALAXIES - HubbleSite.org Beyond individual

galaxies, though, there is also evidence for dark matter in clusters of galaxies. Just like the rotation curves of Galaxies, you can also study the velocities of galaxies inside massive galaxy clusters. The escape speed from an object (in this case a cluster) depends on the mass of that object. Dark Matter, Dark Energy, and the Accelerating Universe ... Scientists think this quasar-galaxy connection is crucial in determining how galaxies evolve from the early universe to today. It's especially important for galaxies a few times larger than the Milky Way, because quasar hosts are generally more massive galaxies. Seeing Beyond the Bright Light NASA's New \$10 Billion Telescope to Study Quasars and ... Discovery of the color. Finding the average color of the universe was not the focus of the study. Rather, the study examined spectral analysis of different galaxies to study star formation. Like Fraunhofer lines, the dark lines displayed in the study's spectral ranges display older and younger stars and allow Glazebrook and Baldry to determine the age of different galaxies and star systems. Cosmic latte - Wikipedia Discover what evidence exists to support the Big Bang theory of the birth of the universe.
