PDF The periodic table is an arrangement of elements based on atomic number. The modern Periodic Table was developed in 1913 by Henry Moseley. He used X-rays to identify the atomic number of each element. When elements are arranged in order of increasing atomic number, their physical and chemical properties show a periodic pattern.

Lab Activity: Periodicity of Properties of the Elements

Graphing Periodic Trends

Introduction: Elements on the periodic table are arranged in such a way that they exhibit patterns in their properties. In this activity, you will graph their properties and analyze their patterns. You will determine the Periodic Trends for the following properties: atomic radius, electronegativity, and ionization energy.
