reading time: 4 minutes On Linux, Docker manipulates iptables rules to provide network isolation. While this is an implementation detail and you should not modify the rules Docker inserts into your iptables policies, it does have some implications on what you need to do if you want to have your own policies in addition to those managed by Docker. Docker and iptables | Docker Documentation iptables-A INPUT -p tcp -m tcp --tcp-flags FIN,SYN FIN,SYN -j LOG --log-prefix=iptables: iptables-save and iptables-restore. The iptables/ip6tables commands provide a way to insert, delete and manage rules. However, the workflow isn't particularly nice. First, you have to first list the existing rules. Next, you need to figure out where a new rule
