Transport across the membrane. The chemical structure of the cell membrane makes it remarkably flexible, the ideal boundary for rapidly growing and dividing cells. Yet the membrane is also a formidable barrier, allowing some dissolved substances, or solutes, to pass while blocking others. Lipid-soluble molecules and some small molecules can permeate the membrane, but the lipid bilayer ... Cell -

Transport across the membrane | Britannica In this thesis a tool for conceptual design and analysis of membrane structures has been developed. The majority of the work has been carried out at the engineering company Buro Happold's head office, in Bath (England), in close collaboration with their research and development team, SMART solutions. SSS - Structural Sealant Services Membrane structures are spatial structures made out of tensioned membranes. The structural use of membranes can be divided into pneumatic structures, tensile membrane structures, and cable domes. In these three kinds of structure, membranes work together with cables, columns and other construction members to find a form. Membrane structure - Wikipedia Cell - Cell - Membrane channels: Biophysicists measuring the electric current passing through cell membranes have found that, in general, cell membranes have a vastly greater electrical conductance than does a membrane bilayer composed

only of phospholipids and sterols. This greater conductance is thought to be conferred by the cell membrane's proteins.
