Procedure Proximate Analysis On Poultry For proximate analysis an ingredient is partitioned into six fractions, namely water, ether extract, crude fiber, nitrogen-free extract, crude protein and ash. Some of the information from proximate analyses (usually the protein, ether extract, fiber and ash values) are shown on descriptive feed labels, which accompany feed-stuffs and complete feeds. B Proximate analysis - Poultry Nutrition - Karel's ... PROXIMATE ANALYSIS This refers to the determination of the major constituents of feed and it is used to assess if a feed is within its normal compositional parameters or somehow been adulterated. method partitioned nutrients in feed into 6 components: water, ash, crude protein, ether extract, crude fibre and NFE. PROXIMATE ANALYSIS OF FEEDSTUFF Proximate analysis of formulated feed When fish are reared in high densities, they require high quality, nutritionally complete and balanced feed to grow rapidly and remain healthy. The series of nutritional analyses that are performed are called “proximate analysis”, and this seeks to estimate the different components of feed. analyses, are applied firstly to materials to be used in formulating a diet as a protein or energy source and to finished feedstuffs, as a control to check that they meet the specifications or requirements established during formulation. 3. PROXIMATE ANALYSES - Food and Agriculture Organization Proximate composition is the term usually used in the field of feed/food and means the 6 components of moisture, crude protein, ether extract, crude fiber, crude ash and nitrogen free extracts, which are expressed as the content (%) in the feed, respectively. The composition as the feed is classified as shown below: Chapter 3 Proximate composition and detergent fiber The amount of gossypol present in cottonseed meal is
