- dummies Download PDF Abstract:

Big data sets must be carefully partitioned into statistically similar data subsets that can be used as representative samples for big data analysis tasks. In this paper, we propose the random sample

partition (RSP) data model to represent a big data set as a set of non-overlapping data subsets, called RSP data blocks, where each RSP data block has a probability ... Title: A Random Sample Partition Data Model for Big Data ... Data analysis is a process that relies on methods and techniques to taking raw data, mining for insights that are relevant to the business's primary goals, and drilling down into this information to transform metrics, facts, and figures into initiatives for improvement. What Is Data Analysis? Methods, Techniques, Types & How-To What is Data Analysis? Data analysis is defined as a process of cleaning, transforming, and modeling data to discover useful information for business decision-making. The
